Office of the Secretary

[Order No. 2906]

OIL AND GAS LEASES FOR LANDS IN OIL SHALE AREAS

Stipulations Imposed

SEPTEMBER 27, 1968.

All oil and gas leases henceforth issued for lands in the oil shale areas of Colorado, Wyoming, and Utah shall include the following stipulations:

(1) No wells will be drilled for oil or gas except upon approval of the Regional Oil and Gas Supervisor of the Geological Survey, it being understood that drilling will be permitted only in the event that it is established to the satisfaction of the Supervisor that such drilling will not interfere with the mining and recovery of oil shale deposits or the extraction of shale oil by in situ methods or that the interest of the United States would best be served thereby.

(2) No wells will be drilled for oil or gas at a location which, in the opinion of the Regional Oil and Gas Supervisor of the Geological Survey, would result in undue waste of oil shale deposits or constitute a hazard to or unduly interfere with mining or other operations being conducted for the mining and recovery of oil shale deposits or the extraction of shale oil by in situ methods.

(3) When it is determined by the Regional Oil and Gas Supervisor of the Geological Survey that unitization is necessary for orderly oil and gas development and proper protection of oil shale deposits, no well shall be drilled for oil or gas except pursuant to an approved unit plan.

(4) The drilling or the abandonment of any well on this lease shall be done in accordance with applicable oil and gas operating regulations including such requirements as the Regional Oil and Gas Supervisor of the Geological Survey may prescribe as necessary to prevent the infiltration of oil, gas, or water into formations containing oil shale deposits or into mines or workings being utilized in the extraction of such deposits.

For the purposes of this directive the oil shale areas of Colorado, Wyoming, and Utah are defined as those lands withdrawn by Executive Order No. 5327 of April 15, 1930.

KENNETH HOLUM,
Acting Secretary of the Interior.

MEAT IMPORT LIMITATIONS

Quarterly Estimates

Public Law 88-482, approved August 22, 1964 (hereinafter referred to as the Act), provides for limiting the quantity of fresh, chilled, or frozen cattle meat (TSUS 106.10) and fresh, chilled, or frozen meat of goats and sheep, except lamb (TSUS 106.20), which may be imported into the United States in any calendar year. Such limitations are to be imposed when it is estimated by the Secretary of Agriculture that imports of such articles, in the absence of limitations during such calendar year, would equal or exceed 110 percent of the estimated quantity of such articles prescribed by section 2(a) of the Act.

In accordance with the requirements of the Act the following fourth quarterly estimates are published:

1. The estimated aggregate quantity of such articles which would, in the absence of limitations under the Act be imported during calendar year 1968 is 990 million pounds.

2. The estimated quantity of such articles prescribed by section 2(a) of the Act during the calendar year 1968 is 950.3 million pounds.

Since the estimated quantity of imports does not equal or exceed 110 percent of the estimated quantity prescribed by section 2(a) of the Act, limitations for the calendar year 1968 on the importation of fresh, chilled, or frozen cattle meat (TSUS 106.10) and fresh, chilled, or frozen meat of goats and sheep (TSUS 106.20), are not authorized to be imposed pursuant to Public Law 88-482 at this time.

Done at Washington, D.C., this 26th day of September 1968.

ORVILLE L. FREEMAN,
Secretary.

Notice of Decision on Application for Duty-Free Entry of Scientific Article

The following is a decision on an application for duty-free entry of a scientific article pursuant to section 6(c) of the Educational, Scientific, and Cultural Materials Importation Act of 1966 (Public Law 89-651, 80 Stat. 897) and the regulations issued thereunder (32 F.R. 2433 et seq.).

A copy of the record pertaining to this decision is available for public review during ordinary business hours of the Department of Commerce, at the Scientific Instrument Evaluation Division, Department of Commerce, Washington, D.C.

Docket No. 68-00594-33-46500. Applicant: U.S. Department of Agriculture, Agricultural Research Center, Beltsville, Md. 20705. Article: Ultramicrotome, LKB 8800A Ultrotome III. Manufacturer: LKB Produkter AB, Sweden. Intended use of article: The article will be used to prepare uniform ultrathin serial sections of cells for histological and histochemical studies concerning the cellular and subcellular level of animal tissues. A major emphasis is being placed on the fine structure of the cell wall in relation to the textural quality of meat. Comments: No comments have been received with respect to this application. Decision: Application approved. No instrument or apparatus of equivalent scientific value to the foreign article, for the purposes for which such article is intended to be used, is being manufactured in the United States.

Reasons: (1) The only known comparable domestic instrument is the Model MT-2 ultramicrotome manufactured by Ivan Sorvall, Inc. (Sorvall). For the purposes for which the foreign article is intended to be used, the applicant requires an ultramicrotome capable of cutting sections of biological specimens down to 50 Angstroms. The foreign article has the capability of cutting sections down to 50 Angstroms (1965 catalogue for the "Ultrotome III" Ultramicrotome, LKB Produkter AB, Stockholm, Sweden). The thin-sectioning capability of the Sorvall Model MT-2 is specified as 100 Angstroms (1966 catalogue for Sorvall "Porter-Blum" MT-1 and MT-2 Ultramicrotomes, Ivan Sorvall, Inc., Norwalk, Conn.). The better thin-sectioning capability of the foreign article is pertinent because the thinner the section that can be examined under an electron microscope, the more it is possible to take advantage of the ultimate resolving power of the electron microscope. (2) The applicant requires an ultramicrotome capable of reproducing a series of ultrathin sections with consistent accuracy and uniformity. We are advised by the Department of Health, Education, and Welfare (HEW) in its memorandum dated July 10, 1968, that this capability in the required dimensions can be furnished only with microtomes based on the thermal advance principle. The foreign article is equipped with a thermal advance system for ultrathin sectioning, in addition to a mechanical advance for thicker sections (see "Ultrotome III" catalogue cited above). The Sorvall Model MT-2 is equipped only with a mechanical advance system for all thicknesses. (See Sorvall Model MT-2 catalogue cited above.) In connection with Docket No. 67-00024-33-46500, which relates to an identical foreign article for which duty-free entry was requested, HEW advised that ultramicrotomes employing the mechanical
