Subpart 101–5.3—Federal Employee Health Services

1. Section 101–5.303(d) is revised to read as follows:

§ 101–5.303 Guiding principles.

* * * * *

(d) Reimbursable costs for providing health services will be based on an operating budget which is a summary of all costs required to operate the health service. The reimbursement cost is prorated to participating agencies by means of a per capita formula computed by dividing the operating budget of the health service by the total number of employees sponsored for service. The size of the Federal population served, the compensation of the employees of the health unit, and other factors of medical economics prevalent in the area are factors which affect the local reimbursement cost. Further, in appropriate cases where more than one health unit is servicing employees housed in the same general locality, costs may be equalized by combining the operating budgets of all such units and dividing the total of the operating budgets by the number of employees sponsored. Special industrial conditions or other abnormal health or accident risk environments may increase the per capita cost.

2. Section 101–5.304(c) is revised to read as follows:

§ 101–5.304 Type of occupational health services.

* * * * *

(c) Such inservice examinations of employees as the participating agency determines to be necessary, such as voluntary employee health maintenance examinations which agencies may request for selected employees. Such examinations may be offered on a limited formula plan to all participating agencies when the resources of the health service staff and facilities will permit. Alternatively, when agencies are required to limit the cost of an occupational health services program, the provision of inservice examinations may be provided to selected employees of individual agencies and reimbursed on an individual basis.
