TITLE 39—POSTAL SERVICE

Chapter I—Post Office Department

PART 35—PROVISIONS APPLICABLE TO THE SEVERAL CLASSES OF MAIL MATTER

PACKING OF RADIOS

In part 35 (39 CFR Part 35) make the following changes:

Insert new § 35.6b to read as follows:

§ 35.6b *Radios, packing of*—(a) *Electric.* Radios must be packed in strong containers such as a fiberboard box with at least 2 inches of firmly packed cushioning material such as shredded paper or excelsior on all six sides completely surrounding the radio, unless a factory carton approved for shipment by parcel post with approved inner cushioning by means of spring pads, molds, etc., is used. Better packing would be two containers, each of double-faced corrugated fiberboard, one within the other, the inside container holding the radio to be cushioned with a form or mold of double-faced corrugated fiberboard to form a 2-inch cushion of air on all six sides. In lieu of such forms or molds, shredded paper or excelsior may be used in sufficient quantity to keep the inner container 2 inches from all inner walls of the outside container.

(b) *Dry battery.* Portable or other radios with plastic or lightweight case which contain a dry battery are acceptable only if the battery is held in a fixed and immovable position therein by means other than the radio case and which cannot damage the radio regardless of the position thereof. If not so constructed, the battery must be removed from the case and packed so that it cannot shift or damage the radio in transit. A separate compartment for the battery may be necessary, which compartment must keep the weight of the battery off the radio regardless of the position of the shipping carton.
